

COMPANY STATEMENT LETTER

Date: January 27, 2026

Name : Teuku Yudhistira N. N
Position : Retention & Collection Operation
Company : PT Telekomunikasi Selular

Hereby states that PT Telekomunikasi Selular (Telkomsel) agrees with the solution and its specifications provided by the students of the Faculty of Computer Science, President University, regarding the Capstone Design Project. This solution is proposed to solve specific problems such as manual data processing latency, unstructured field reporting, and the lack of real-time operational monitoring in the C3MR division.

Below is the list of students involved in the Capstone Design Project:

1. Auza Syamil Nabawi
2. Rashad Abdul Faqih
3. Atthariqul Hazam Albanna

The product resulting from this Capstone Design Project is an Integrated Operational Management System, which serves to streamline the C3MR workflow by combining a Web Admin Portal for office management and a Telegram Mini App for efficient field reporting without requiring native app installation.

Below are the specifications agreed upon by us as project partners for the Capstone Design Project:

Modules	Features	Technology/Platform
1. Web Admin Portal (Office Side)	● Bulk Target Input: Feature to import/upload target data from Excel/CSV. ● Task Assignment: Distribute tasks to specific field officers. ● Data Verification: Review and approve reports submitted from the field.	● Frontend: React.js ● Platform: Web-based Dashboard
2. Telegram Mini App (Field Side)	● Zero-Install Interface: Accessible directly inside Telegram (No APK needed). ● Input Visit Result: Form to input status (Paid/Promise) & notes. ● Evidence Upload: Upload photo proof directly via chat interface.	● Frontend: Telegram Web Apps (HTML5/JS) ● Platform: Telegram Mobile
3. Backend & Data Management	● Real-time Synchronization: Instant data sync between Mini App and Web Dashboard. ● API Management: Handling data requests securely. ● Database Storage: Centralized storage for customer data & logs.	● Backend: Python (FastAPI) ● Database: PostgreSQL (Supabase)
4. Summary Bot & Notification	● Daily Recap: Automated summary of "Total Target vs Realization". ● Push Notification: Real-time alerts for critical updates.	● Platform: Telegram Bot API
5. Security System	● User Whitelisting: Only registered Telegram IDs can access the system. ● Data Masking: Hiding sensitive PII (Phone Numbers) in the view mode.	● Security: Role-Based Access Control (RBAC)

We understand that this project aims to provide innovative and relevant solutions to the problems in our company. We also ensure that we will fully support this project by providing necessary information, data (dummy/simulation data during development), and resources to ensure the completion of this final project.

Sincerely,

(Signature)  **Telkomsel**
